

MailRetriever™ for Data Protection Manager 2007

Open, Browse, Search, Restore & Export E-Mail Directly from Microsoft® DPM

For individual message or mailbox recovery, AppAssure Software and Microsoft Storage Solutions have partnered together to deliver MailRetriever for DPM, enabling Microsoft Exchange administrators around the world to gain efficient and economical access to message-level recovery.

Microsoft System Center Data Protection Manager 2007 (DPM) delivers near continuous data protection of Microsoft Exchange and other Windows application and file servers – using disk and tape based backup, with data synchronization up to every 15 minutes and data recovery of Storage Groups and mail databases to within one transaction.

“MailRetriever helps restore sanity to the chaotic and stressful daily life of Exchange administrators and network engineers. By delivering an easy-to-use application that delivers needed message-level recovery capabilities, MailRetriever is a great compliment to the Microsoft System Center Data Protection Manager solution for protecting and recovering Microsoft Exchange Server. If your business requires restoring lost and deleted messages, Microsoft suggests enhancing your DPM solution with MailRetriever.”

*Marc Kamstrup-Braad,
Senior Program Manager
Microsoft DPM*

Advanced Message-Level Restore & eDiscovery for Exchange

MailRetriever for DPM is an affordable and easy-to-use software package for browsing, recovering, searching, exporting, and analyzing e-mail and mailbox content from Microsoft Exchange. MailRetriever integrates directly with DPM 2007 so that you can open data stores directly from a recovery point and restore messages, mailboxes, calendar items, tasks, notes and more. With MailRetriever and DPM, you are never more than just a few clicks away from recovering a message or mailbox.

Search & Recover E-Mail in Any Microsoft Exchange EDB

MailRetriever opens any EDB from a DPM recovery point and searches mailboxes, messages, calendars, tasks, notes and folders. The results can be restored to the original location, a recovery folder, or exported to a PST file for portability in just seconds. Browse and search the entire EDB or just a specific mailbox to locate any items (messages, tasks, calendars) and then perform a simple restore.

Perform eDiscovery & Output to a PST for Case Analysis

MailRetriever quickly identifies messages related to e-discovery requests. Simply search for messages containing a keyword, phrase or username, and MailRetriever scans the entire EDB for messages that meet the selected criteria. The results can then be exported to a folder or PST which satisfies the “native file format” requirement for legal and compliance e-discovery.

View Individual Messages

With MailRetriever, you can view a message’s contents, including all of its attributes. Additionally, you have access to calendar items, tasks, notes and more.

Integrated with DPM Recovery Points - Easy to Use Interface

MailRetriever integrates directly with DPM’s recovery points for fast and easy message-level restores and recovery. Simply select the DPM recovery point, locate your messages with the browse and search utility, and MailRetriever does the rest.

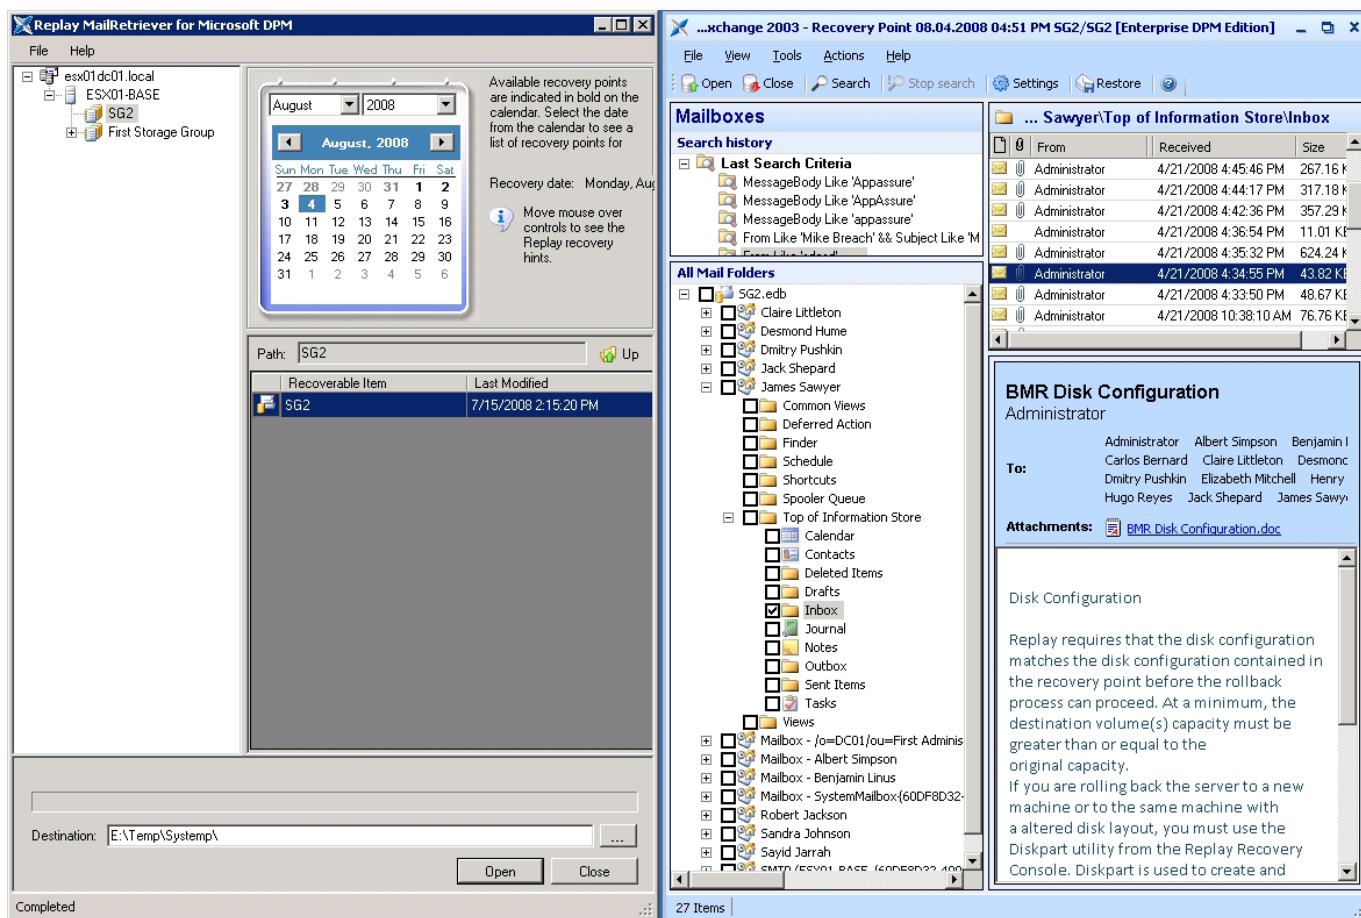

Save Disk Space

MailRetriever requires less disk space for message-level recovery and eliminates the need to stand up a separate server. Additionally, MailRetriever reduces the number of days messages need to be stored in the transport dumpster.

ISV/Software Solutions

AppAssure is a managed certified partner of Microsoft. To learn more about Microsoft's suggestions for message-level recovery and DPM, please visit their site at: www.microsoft.com/DPM.

Access and explore the contents of DPM recovery points directly from MailRetriever and perform a fast restore.
